### How to calculate the planting distance from an infrastructure.

#### Soil Factor (Fs)

- |   |             |
|---|-------------|
| 1. Deep, permeable but dry or infertile soil or sand: 0-10% | (Fs) = 0.9  |
| 2. Shallow soil over sheerock or hardpan: 0-10%             | (Fs) = 0.9  |
| 3. High, if only periodic, water table: 10%                 | (Fs) = 0.9  |
| 4. Rocky or stony soil: 10-20%                              | (Fs) = 0.85 |
| 5. Stiff, heavy, compact clay: 20-30%                       | (Fs) = 0.75 |

#### Infrastructure Factor (Fi)

- |   |            |
|---|------------|
| 1. Masonry valve boxes, boundary walls, plastic irrigation or sewerage pipes, paving, tarred roads and building foundations: 0% | (Fi) = 1.0 |
| 2. Concrete, rubber-jointed pipelines: 0%   | (Fi) = 1.0 |
| 3. Steel, rubber-jointed pipelines: 0   | (Fi) = 1.0 |
| 4. Steel, lead-jointed pipelines: 0%  | (Fi) = 1.0 |
| 5. Welded steel pipelines: 30%  | (Fi) = 0.7 |

Example 1: Consider a tree (Faidherbia albida) where the max. root spread is 22m, and that the limit of potential physical damage is 7m (Safe Allowable Prox.- Fp)  
 If this tree is to be planted in rocky soil and if the infrastructure in question is a welded steel pipeline, then this distance can be calculated as follows.

$$\text{Distance} = Fp \times Fs \times Fi = 7 \times 0.85 \times 0.7 = 4.165\text{m}$$

Therefore this tree should be planted no closer than 4,165m to the outer edge of the pipeline under these conditions

Example 2: Consider a tree (Celtis africana) where the max. root spread is 20m, and that the limit of potential physical damage is 6m (Safe Allowable Proximity- Fp)  
 If this tree is to be planted in deep, permeable but dry or infertile soil or sand and if the infrastructure in question is a boundary wall, then this distance can be follows.  
 calculated as follows.

$$\text{Distance} = Fp \times Fs \times Fi = 6 \times 0.9 \times 1.0 = 5.4\text{m}$$

Therefore this tree should be planted no closer than 5.4m to the outer edge of the wall under these conditions
